GCX Worksheet

Pedals, FX Loop, 3 Channel Amp Switching

This setup starts with a small pedalboard on the floor. The signal then goes into the GUITAR IN buffer and drives 3 pedals into the front of the amp. Of special note is the way the amp's FX loop is routed. The G-Force isn't in the loop. Instead, the FX send goes into loop 4 so it can be muted going into the G-Force. (NOTE: This only works if your amp has a Parallel FX loop!) This allows you to turn the effect off while still keeping the trails of effects like reverb and delay.

Notes:

- | | | | |
|---------|------------------------|---------|--------------------------|
| Loop #1 | <u>PEDAL #1 ON/OFF</u> | Loop #5 | <u>CHANNEL 1 SELECT</u> |
| Loop #2 | <u>PEDAL #2 ON/OFF</u> | Loop #6 | <u>CHANNEL 2 SELECT</u> |
| Loop #3 | <u>PEDAL #3 ON/OFF</u> | Loop #7 | <u>CHANNEL 3 SELECT</u> |
| Loop #4 | <u>G-FORCE ON/OFF</u> | Loop #8 | <u>SOLO BOOST ON/OFF</u> |
